

RANGE CALIBER CHART

The following chart outlines some common cartridges/calibers that are allowed, and which ones are not allowed to be shot on Target World's range. All possible cartridges cannot be covered and if you have any question about the one you would like to use, please ask the range officer. Because our backstop is limited to 2,000 feet per second (fps) muzzle velocity, we cannot allow cartridges that have the potential to exceed that limit to be used. If you are caught using one of the restricted cartridges shown in the chart, or one not covered that has a muzzle velocity above 2,000 fps, you will be charged for any damages caused. As a general rule, most (but not all) common handgun calibers are allowed to be shot on the range and most rifle caliber cartridges other than .22 LR are restricted.

CARTRIDGE	ALLOWED FOR HANDGUN?	ALLOWED FOR RIFLE?
.17 HMR/.17HM2	No	No
.22LR & .22 Short	Yes	Yes
.22 WMR	Yes	No
